

WESTSIDE TRAIL BRIDGE CROSSING OVER HIGHWAY 26

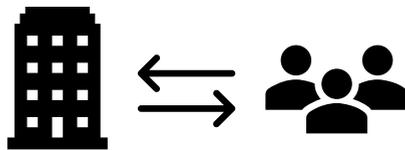

Bridging people across 25 miles of trails

THPRD is exploring the development of a pedestrian-bicycle bridge over Highway 26 to link the Westside Trail from SW Greenbrier Pkwy to the north side of Highway 26. During this phase of the project (2020-2021), THPRD will study the practicality of constructing the bridge. This bridge crossing would close a gap in the larger metro regional trails system, established in partnership with Metro, as well as counties and municipalities across the region.

About the bridge study

Expanding one of the region's most critical corridors with 100,000+ users per year

Connecting people to schools, jobs, recreation, public transit, shopping, and natural areas

Linking over 25 miles of trail for community pedestrians and cyclists

Collaborating with local organizations like Metro, ODOT, City of Beaverton, Washington County, PGE, BPA, and many more

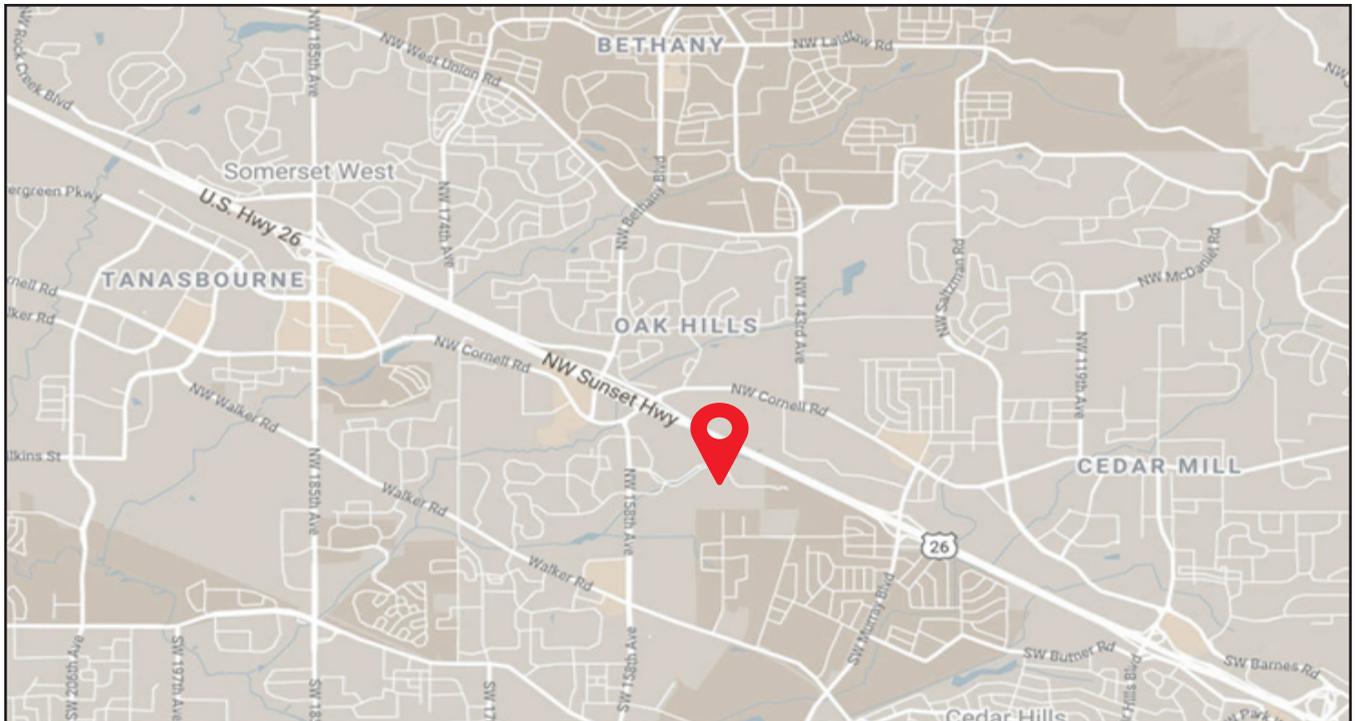

Studying options for bridge size, type, location, budget, as well as community interest and possible barriers
